**Enterprise Integration - SOA vs EAI vs ESB**

SOA is different from the EAI approach in that it does not depend on a third-party solution. Service oriented architecture is an integration paradigm that is based on a fundamental design principle and provides architectural interoperable services - hence its name. It encompasses legacy systems, software components and message processing capabilities.

**Key Differences between ESB, EAI and SOA**

EAI vs. SOA vs. ESB Enterprise application integration has a lot in common with a service-oriented architecture (SOA) and an enterprise service bus (ESB), but they also have some key differences. For starters, an enterprise service bus is actually
one model of a service-oriented architecture, just as an SOA is one way to achieve EAI.

Enterprise Application Integration (EAI) – Useful to clearing up the confusion of integration semantics: Let’s firstly clarify that Sirius does not consider EAI to be an approach like SOA or ESB. We consider it to be the broader concept called Enterprise application integration (EAI) since, by definition, EAI is the use of technologies and services across an enterprise to enable the
integration of software applications and hardware systems.

iPaaS vs. ESB. In the late 1990s and early 2000s, businesses invested deeply in ESB (enterprise service bus) technology to support their SOA (service-oriented architecture) initiatives and on-premises integration efforts. However, ESB is not meeting the digital transformation needs of the modern business.
