Fuzzy Sets And Systems Theory
Since its launching in 1978, the journal Fuzzy Sets and Systems has been devoted to the international advancement of the theory and application of fuzzy sets and systems. The theory of fuzzy sets now encompasses a well organized corpus of basic notions including (and not restricted to) aggregation operations, a generalized theory of relations, specific measures of information content, a calculus of fuzzy numbers.

Fuzzy sets can be considered as an extension and gross oversimplification of classical sets. It can be best understood in the context of set membership. Basically it allows partial membership which means that it contain elements that have varying degrees of membership in the set.

Fuzzy Sets and Systems - 1st Edition
In 1965, Lotfi A. Zadeh, a professor of electrical engineering with the University of California at Berkeley, published the first papers on his new theory of Fuzzy Sets and Systems. Since the 1980s, this mathematical theory of “unsharp amounts” has been applied with great success in many different fields.

Fuzzy expert system is one such system introduced by Kandel (1992) [4]. This is an intelligent tool capable of making decisions and also deals with ambiguous data. FES has improved the excellence, effectiveness and quality in recent times.

In mathematics, fuzzy sets (a.k.a. uncertain sets) are somewhat like sets whose elements have degrees of membership. Fuzzy sets were introduced independently by Lotfi A. Zadeh and Dieter Klaua [1] in 1965 as an extension of the classical notion of set. At the same time, Salii (1965) defined a more general kind of structure called an L-relation, which he studied in an abstract algebraic context.

Fuzzy sets are often defined as triangle or trapezoid-shaped curves, as each value will have a slope where the value is increasing, a peak where the value is equal to 1 (which can have a length of 0 or greater) and a slope where the value is decreasing. [citation needed] They can also be defined using a sigmoid function. One common case is the standard logistic function defined as

The TODIM is a decision-making method that can examine the psychological behavior of decision-makers (DMS). However, the traditional TODIM method has still not been having the ability to overcome fuzzy information such as interval values and linguistic variables. This paper proposes an extended TODIM decision-making model for multiple-attribute decision-making (MADM) problems in a linguistic ...

Type-2 fuzzy sets and systems generalize standard Type-1 fuzzy sets and systems so that more uncertainty can be handled. From the very beginning of fuzzy sets, criticism was made about the fact that the membership function of a type-1 fuzzy set has no uncertainty associated with it, something that seems to contradict the word fuzzy, since that word has the connotation of lots of uncertainty.
